HISTORICAL TRENDS

CALIFORNIA DEPARTMENT OF CORRECTIONS AND REHABILITATION

1987 - 2007

This report presents basic information about the California Department of Corrections and Rehabilitation's (CDCR) prisoners and parolees. Historical trend information covering the past 21 years is presented in graphs and tables for various offender characteristics and the institutional design bed capacity.

Institution Population

Figure one and Table one show the number of offenders incarcerated in California State prisons, conservation camps, community correctional centers, or Department of Mental Health hospitals. The institution population grew from 66,975 in 1987 to 171,444 in 2007. The largest population increase occurred between 1987 and 1997 when the institution population increased by 131.8 percent. Since 1997, the population has increased only 10.4 percent. The institution population decreased between calendar years 2006 and 2007 by 1,084 offenders. The last time the institution population decreased was in calendar year 2001.

Racial Composition

Figure two and Table two illustrate the racial composition of the institution population from 1987 to 2007. Over the last 21 years, the Hispanic population has risen from 28.1 percent to 38.6 percent, an increase of 10.5 percentage points. During this time period, the White population decreased 5.8 percentage points and the Black population decreased 6.0 percentage points. Although the racial composition of the male institution population is similar to the overall population, the racial composition of the female population has remained constant during the last 21 years, averaging about 37.2 percent White, 32.5 percent Black, and 24.7 percent Hispanic.

Institution Population by Offense Category

Figure three and Table three show the change in the percent of felons in the institution population who were convicted of a person, property, drug, or other offense. From 1989 until 1998, the percent of male felons convicted of person offenses remained between 43 and 45 percent. Beginning in 1998, this population has steadily increased. Since 2003, over 50 percent of the male felon institution population was convicted of committing a crime against a person. From 1989 through 2001, female felons were more likely to be incarcerated for committing a drug offense. Since 2002, female felons were more likely to be incarcerated for committing a property crime.

New Admissions by Offense Category

Figure four and Table four describe the rate of new felon admissions per 100,000 California population. The California population is obtained from the Department of Finance (DOF), Demographic Research Unit's E-7 Report. Although *Historical Trends 1986-2006* limited the California population to ages 18 through 49, inclusive; *Historical Trends 1987-2007* returns to using the entire California population. Over the last 21 years, the rate of felon new admissions per 100,000 California population has fluctuated from a low of 95.66 in 1987 to a high of 149.42 in 1998. The 2007 rate was 124.40, a 5.88 decrease from 2006.

Parole Violators Returned to Prison

Figure five and Table five identify the number of felon parole violators returned to prison. From 1989 through 1995, parole violators returned to prison fluctuated between 50,000 and 70,000. From 1997 through 2002, the population remained between 84,500 and 89,500. Although there was a small decline during 2003-2005, the population surpassed 90,000 in 2007. From 1987 through 2007, the percent of parole violators returned to prison with a new term fluctuated between 16 and 25 percent, except during 1990 through 1995 when the percent was above 25 percent each year.

Admission/Return Status

Figure six and Table six show New Admissions, Parole Violators-Returned to Custody (PV-RTCs) and Parole Violators-Returned With a New Term (PV-WNTs) as a percent of the overall felon institution population. During the last 21 years, the percent of New Admissions in the felon institution population has averaged 62 percent, PV-RTCs has averaged 14 percent, and PV-WNTs has averaged 24 percent. The lowest percents of New Admissions (58%-59%) occurred between 1997 and 2001 and the highest percent (67%) occurred in 1987. The lowest percent of PV-RTCs (11%) occurred in 1992, 1993, and 2007, while the highest percents (17%-18%) occurred between 1997 and 2002. PV-WNTs has remained between 24 and 25 percent of the population since 1994.

Felon Parole and Civil Narcotic Outpatient Population

Figure seven and Table seven show the overall growth in the felon parole and Civil Narcotic Addict (CNA) outpatient population. The total parole population increased from 42,298 parolees in 1987 to 126,906 parolees in 2007. After three years of declining population from 2002 through 2004, the parole population increased by 6,807 parolees in 2006 and 5,098 parolees in 2007.

Releases to Parole

Figure eight and Table eight present information about the total number of felon releases to parole each year. Felon releases to parole increased from 50,512 releases in 1987 to 137,590 releases in 2007. The largest increase in releases to parole occurred between 1987 through 1997, when releases increased by 136.4 percent. In contrast, between 1997 and 2007, releases increased by only 15.2 percent.

Median Time Served on Prison Sentence

Figure nine and Table nine identify the median months of time served on prison sentences by felons first released to parole. Between 1987 and 2007, male felons served an average of 17 median months, females served an average 14 median months, and the overall average median months served was 16. The highest number of median months served by males, 20 months, occurred in 2002 and the highest number of median months served by females, 16 months, occurred in 1988 and 1989.

Design Bed Capacity and Population

Figure ten and Table ten show the change in the design bed capacity of CDCR facilities, the institution population, and the rate of occupancy from June 30, 1987 to June 30, 2007. From 1987 to 2007, design bed capacity rose by 132.1 percent. At the same time, the total institution population increased by 164.1 percent. As a result, the rate of occupancy rose from 172.6 percent in 1987 to 196.4 percent in 2007. In 2006, CDCR began transferring inmates to the California Out-of-State Correctional Facilities (COCF) program. On June 30, 2008, 4,305 offenders were housed in COCF facilities. The COCF program should reduce the rate of occupancy in California State institutions.

This document was prepared by Cynthia Smith and Cindy Wagstaff, Offender Information Services Branch. In summarizing the data, efforts were made to maintain a reasonable consistency among years as various definitions of data elements changed. Numbers and percents used in the report may not add to totals due to independent rounding.

Additional statistical data may be obtained from:

* INSTITUTION POPULATION includes offenders sentenced to state prison who are incarcerated in a state prison, conservation camp, community correctional center, or Department of Mental Health hospital.

** CNA -- Civil Narcotic Addict.

*** OTHERS includes Youth Authority wards, county diagnostic cases, safe keepers and prisoners from other states or the federal prison system.

* Population estimates are from the Demographic Research Unit, California Department of Finance E-7 Report.

** OTHER includes all offenses that do not fall under the Person, Property, or Drug types and any felon new admission with missing offense data.

*** This report reflects New Admissions ONLY. PVWNT's were inadvertently added to the totals for 2001, 2002 and 2003 and have since been removed.

* Design bed capacity is the number of inmates a facility was originally designed to house. Increases or decreases indicate beds lost or gained due to conversions, additions, or deactivation.

**Rate of occupancy = population divided by number of design beds multiplied by 100.
